

Abstract

- Title:** Comparison of participation in physical activities of secondary school students and primary school pupils in Prague
- Objectives:** The aim of the thesis was to find and compare the participation in extracurricular physical and sport activities of Prague's secondary school students and Prague's primary school pupils based on questionnaire survey and following evaluation of the obtained data.
- Methods:** The research was realized using the questionnaire survey. The questionnaire was designed specifically for this research.
- Results:** The research results suggest that the physical activities are comparatively expanded among secondary school students and primary school pupils in Prague. It has been statistically proven that primary school pupils are interested in physical activities in organized form more than secondary school students. There are not significant statistical differences between primary school pupils and secondary school students in the frequency of doing physical activities.
- Keywords:** physical activities, secondary school, primary school
